Selective clavage in the avian retroviral long terminal repeat sequence by the endonuclease associated with the alpha beta form of avian reverse transcriptase
                                                                                                  ALELTR2
Rous-associated virus 2 (RAV-2) LTR with reverse transcriptase endonuclease cleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Original source text: Rous-associated virus 2 replication form I DNA, clone RAV2-2 [1], and plasmids pFG1 and pGJ4 [2].

Reverse transcriptase associated endonuclease (purified from avian sarcoma virus) cleavage sites have been mapped in two tandemly linked Rous-associated virus-2 LTR sequences. The enzyme may be involved in viral cDNA integration in the host, since it generates a 6 bp staggered overlap that spans the junction. The clone sequence (RAV2-2) corresponds to the unintegrated replicative form [RR) I of RAV-2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ठे
                                                                                                                                expression vector construct containing the vacular endothelial growth factor 2 (VBGF-2) insert. The nucleic acid is useful for producing a host cell by transducing, transforming or transfecting a host cell with the DNA and for treating a parient having chronic limb ischaemia or myocardial ischaemia, or a disease or disorder selected from autoimmune disorders (e.g. rheumatoria arthritis, dermatitis), allergic reactions or conditions (e.g. asthma), organ rejection, inflammatory conditions (e.g. crohn's disease), hyperproliferative disorders (e.g. Gaucher's disease), diseases due to viral, bacterial, fungal or parasitic infection, cardiovascular disorders (e.g. cardiowascular disorders (e.g. cardiowascular disorders and embolism. This sequence represents the pVGI.1 expression vector containing the VBGF-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

The present sequence is a promoter element derived from the cytomegalovirus (CWV) immediate early promoter. The promoter the promoter element is used to achieve persistent expression of an operably linked transgene, especially human cystic fibrosis transmembrane conductance regulator especially human cystic fibrosis transmembrane conductance regulator expression of human alpha-galactostidase gene, in a target cell. The expression cassette comprising the promoter element operably linked to a transgene is delivered to a target cell via a plasmid or an adenoviral vector lacking the B4 region. As the promoter element functions independently of the viral genomes thereby increasing the carrying capacity containing reduced viral genomes thereby increasing the carrying capacity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         containing reduced viral genomes thereby increasing the carrying capacity of the vector while decreasing the potential for host immune reaction.

```
ABQ17575 to ABQ20506 represent isolated polynucleotide (I) sequences, and ABP54446 to ABP54472 represent protein (II) sequences, from the present invention. (I) and (II) have cytostatic activity and can be used in gene therapy and vaccines. (I), (II), antibodies and compositions from the present invention are useful for diagnosing, preventing and treating cancer, which expresses CT or CP mRNA antigens. They are useful for stimulating immune response. They can also be useful in virology, immunology, microbiology, molecular biology and recombinant DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              375 TITIGGCAGTACATCAATGGGCGTGGATAGCGGTTTGACTCACGGGGATTTCCAAGTCTC 434

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a promoter element derived from the cytomegalovirus (CMV) immediate early promoter. The promoter element is used to achieve persistent expression of an operably linked transgene, especially human cystic fibrosis transmembrane conductance regulator gene (CFTR gene) or human alpha-galactosidase gene, in a target cell. The expression cassette computaing the promoter element operably linked to a transgene is delivered to a target cell via a plasmid or an adenoviral vector lacking the E4 region. As the promoter element functions independently of the viral E4 region, this allows the use of vectors containing reduced viral genomes thereby increasing the carrying capacity of the vector while decreasing the potential for host immune reaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

This promoter can be mutated at the Gfi-1 binding sites to be used in a novel isolated DNA construct which contains at least one mutated binding site for a Gfi-1 to transcription repressor that hinders or prevents binding of Gfi-1 to this site. The expression vector contains an expression regulatory segment that contains at least one copy of the sequences shown in AAV19571 to AAV19685 linked operably to a coding segment selected from a group of cytokines, interleuxins, interferons, growth factors and proton oncogenes, and an isolated DNA molecule containing one of two 500 base pair sequences shown in AAV14003 and AAV14004. Altering the binding site increases expression of these genes controlled by regulators that include binding sites for Gfi-1 both in cultured cells and in vivo (for gene therapy or DNA vaccination). A vector containing a normal gene under control of a regulator with the mutated binding site can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA containing inactive, mutated binding site for Gfi-1 transcription repressor - used to increase gene expression in vitro

The present sequence represents the Human cytomegalovirus promoter region. The compositions of the invention bind to this sequence. The specification describes a composition that comprises low density lipoprotein (LDL) and apolipoproteins for the binding and in vivo transport of nucleic acids. The composition is used to deliver nucleic acids to eukaryotic cells, in vivo or in vitro, for expressing a therapeutic polypeptide or antisense molecule (or riboxyme). Specifically they are used for gene therapy of cancers (particularly non-small cell lung carcinoma), diabetes, cystic fibrosis and
Composition comprising nucleic acid bound to LDL or VLDL lipoprotein - used for delivering nucleic acid to cells for gene therapy and antisense treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 589 BP; 157 A; 140 C; 143 G; 149 T; 0 other;

The invention relates to a 5' and a 3' fragment of the chicken beta-actin promoter (AAP84452 and AAP84453, respectively), which exhibit promoter activity. The chicken beta-actin promoter fragments may be used to drive expression of a heterologous gene in a recombinant vector used as the active component of a genetic vaccine. The present sequence represents a cyclomegalovinus (GWN) immediate-early (IR) promoter aniancer, a portion of which was used in the construction of the chimeric Pec promoter (AAF84454) in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           77 TTTTGGCAGTACATCAATGGGCGTGGATAGCGGTTTGACTCACGGGGATTTCCAAGTCTC 136

X 2 = Gly-Ser-Leu or Pro-Leu-Ala,
The signal peptides are useful in the preparation of human growth
hormone and transformed chlorella. Signal peptides, DNA encoding the
hopptides, gene expression cassettes, recombinant vectors containing the
cassettes, and transformants having the vectors are provided. The
present sequence is a promoter which may be used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is provided in a specification relating to signal peptides for expression and secretion of a protein in chlorella. The peptides are of the formula Met-Ala-Asn-Lys-X_1-(Leu)_n-X_2-Ala-Ser-Gly.

gene expression systems useful for modulating gene expression in host cells. The gene expression system encodes a polypeptide with a DNA-binding domain recognizes a response element associated with a Good whose expression is to be modulated and/or a ligand binding domain (IBD) comprising a LBD from a nuclear receptor and a second gene expression cassette capable of being expressed in a host cell comprising a transpolymucleotide sequence encoding second polypeptide comprising a transpolymucleotide sequence encoding second polypeptide comprising a transpolymucleation domain and/or a LBD comprising a LBD from a nuclear receptor other than an ecdysone receptor, a retinoid X receptor or a USP receptor and the LBDs from the first and second polypeptides are different and dimerise). The ecdysone and retinoid X receptor based inducible gene expression systems useful for modulating gene expression inducible gene expression systems useful for modulating gene expression proteins and antibodies, cell-based high-throughput screening assays (HTS), functional genomic and regulation of traits in transgenic plants and animals. The present sequence represents a cauliflower mosiac virus, CWV, promoter which is used in an inducible gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to Ecdysone and retinoid X receptor based inducible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 314 TITIGGCAGTACATCAATGGGCGTGGATAGCGGTTTGACTCACGGGGATTTCCAAGTCTC 373
